Rossana Damiano

Semantic resources for cultural heritage annotation.

In this seminar, I will introduce the standard models and ontologies for representing cultural heritage and their exploitation for annotating cultural objects in online collections. First, I will introduce CIDOC-CRM and will illustrate the main patterns for describing artifacts and their related activities in this ontology; Linked Data resources for CH, such as authority files and thesauri available in RDF (e.g., VIAF, AAT, TGN) will be illustrated. Finally, I will proceed to exemplify how these resources can be used in OmekaS, the open-source semantic platform for digital collections
